\*Max DD= A drawdown is the “pain” experienced by an investor in a specific investment. As an example, an investor starting out with a \$100,000 account who sees it fall down to \$80,000 before it runs back up to \$110,000 saw a \$20,000 loss (\$100K – \$80K), which would equal a -20% (\$20K/\$100K) drawdown. The so called Maximum Drawdown (Max DD) is the worst such peak to valley down period for an investment.

\*\*Disclaimer: Past performance is not necessarily indicative of future results. These performance numbers are calculated using the liquidating value of a single client at Attain trading the listed program, and are believed to be representative of all similar clients invested in the program. A 20% incentive fee and 2% annual management fee are deducted from all profitable months, regardless of whether the program is at a new equity high. These numbers may vary from the actual performance numbers presented by the CTA upon completing their accounting for the month gone by, and should not be considered apart from the performance numbers listed in the disclosure document for the program listed.

## DISCLAIMER

Forex trading, commodity trading, managed futures, and other alternative investments are complex and carry a risk of substantial losses. As such, they are not suitable for all investors.

The entries on this blog are intended to further subscribers understanding, education, and – at times- enjoyment of the world of alternative investments through managed futures, trading systems, and managed forex, and is not intended as investment advice, or an offer or solicitation for the purchase or sale of any financial instrument. Unless distinctly noted otherwise, the data and graphs included herein are intended to be mere examples and exhibits of the topic discussed, are for educational and illustrative purposes only, and do not represent trading in actual accounts. Opinions expressed are that of the author.

The mention of specific asset class performance (i.e. +3.2%, -4.6%) is based on the noted source index (i.e. Newedge CTA Index, S&P 500 Index, etc.), and investors should take care to understand that any index performance is for the constituents of that index only, and does not represent the entire universe of possible investments within that asset class. And further, that there can be limitations and biases to indices such as survivorship and self reporting biases, and instant history.

The mention of general asset class performance (i.e. managed futures did well, stocks were down, bonds were up) is based on Attain’s direct experience in those asset classes, estimates of performance of dozens of CTAs followed by Attain, and averaging of various indices designed to track said asset classes.

It should be noted that past market performance is not indicative of future market movement. No market data or other information is warranted by Attain Capital Management as to completeness or accuracy, express or implied, and is subject to change without notice.

Managed Futures Disclaimer:

Past Performance is Not Necessarily Indicative of Future Results. The regulations of the CFTC require that prospective clients of a managed futures program (CTA) receive a disclosure document when they are solicited to enter into an agreement whereby the CTA will direct or guide the client's commodity interest trading and that certain risk factors be highlighted. The disclosure document contains a complete description of the principal risk factors and each fee to be charged to your account by the CTA.
