RCM Alternatives

We bet more than just a driver....probably a putter, some wedges, and short irons too.

An experienced golfer knows the course serves up different conditions, requiring different tools. You can't get out of a sand trap with a driver. So why do you only use a handful of clubs when investing? Most people invest using stocks and bonds only, and are ill prepared when the game of life puts them in the bunker (like 2008).

Managed futures have become known as the crisis period investment thanks to their strong performance during stock market crisis periods such as the Internet Stock Bubble burst in 2000 and credit crisis of 2008. [Past Performance is Not Necessarily Indicative of Future Results]

Why Managed Futures?

Because they can offer positive performance in bear markets, be a hedge against inflation, provide tactical commodity exposure, and offer tremendous liquidity and transparency.

Managed Futures refers to alternative investments which rely on professional investment managers known as Commodity Trading Advisors (CTAs), who specialize in trading exchange traded futures contracts both long and short in markets in all corners of the world.

About RCM Alternatives

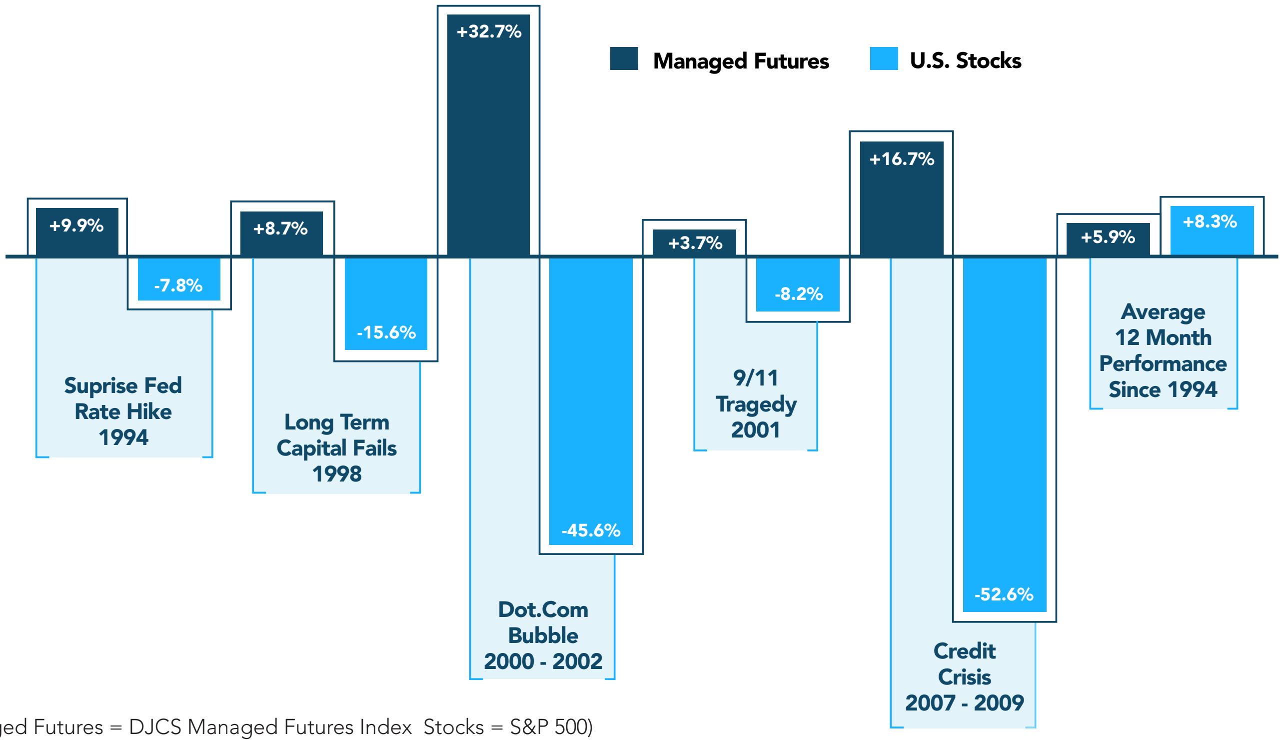
RCM Alternatives ("RCM") is a registered commodity brokerage firm which helps high net worth individuals, registered investment advisors, and institutional investors identify and **access top alternative investments** focused in commodities and managed futures.

In addition to assisting end investors, RCM's **low-cost, consultative, education-based approach** to alternative investments is a natural fit with investment advisors, while a professional services desk assists hedge funds, commodity trading advisors, and mutual funds set up and efficiently access markets around the world.

RCM's asset management arm, **registered Commodity Pool Operator** Attain Portfolio Advisors, aids investors and their advisors in accessing select managers which have been filtered through our real-time due diligence process at lower investment levels via institutional grade fund vehicles structured as Limited Liability Companies.

Performance when Stocks are Down

Futures-based investments are often viewed as higher return/ higher risk, but it is their non correlation with traditional markets which causes managed futures investments to be volatility reducers and portfolio diversifiers during the bad times for traditional investments.



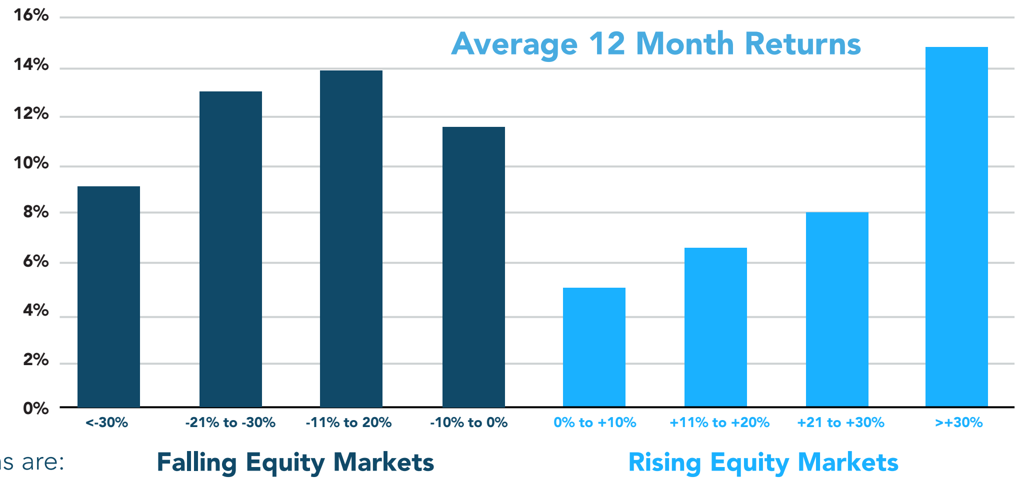
(Source: Managed Futures = DJCS Managed Futures Index Stocks = S&P 500)

...and when Stocks are Up

Non Correlation does not equal negative correlation, meaning there will be periods when stocks and managed futures both go up in tandem, and periods when they go down in tandem, as well as the periods where they move opposite one another.

Taking a longer perspective shows that managed futures have performed in a wide range of stock market environments, including positive performance during stock rallies.

Managed Futures Have Returned...



When Stock Returns are:

This table shows the average 12 month return for managed futures, as represented by the BarclayHedge CTA Index during periods when the 12 month return for the S&P 500 falls into the listed performance buckets. Data is from 1983 through 2015.

You should fully understand the risks associated with trading futures, options and retail off-exchange foreign currency transactions ("Forex") before making any trades. Trading futures, options, and Forex involves substantial risk of loss and is not suitable for all investors. You should carefully consider whether trading is suitable for you in light of your circumstances, knowledge, and financial resources. You may lose all or more than your initial investment. Past performance is not necessarily indicative of future results.
